Introduction		ix
I.	The Maximum Entropy Variational Principle for Single Channel Power Spectral Analysis	1
II.	Single Channel Maximum Entropy Spectral Analysis from Autocorrelation Measurements	6
	A. Solution of the Variational Formulation	8
	1. The Functional Form of the Maximum Entropy Spectrum	8
	2. The Analytic Integration Derivation	9
	3. The Z-Transform Derivation	11
	4. The Prediction Error Filter Equation	12
	5. The Modern Levinson Algorithm	13
	6. General Comments	18
	B. Extending the Autocorrelation Function	19
	1. The Shortest Prediction Error Filter Theorem	19
	2. Factorization of the Toeplitz Matrix	21
	3. The Fundamental Autocorrelation Matrix Theorem	23
	4. Allowable Values for the Next Autocorrelation Lag	26
	5. The Autocorrelation - Reflection Coefficient Theorem	28
	6. The Prediction Error Filter Minimum Phase Theorem	30
	7. The Maximum Entropy Extension	31
	8. Pure Spectral Line Extensions	36

C. Time Series Derivations and the Burg Estimation Technique 39

1. The Least Mean Square Error Linear Predictor 40

2. The Levinson Algorithm Revisited 44

3. Whitening the Time Series 46

4. The Autoregressive Process 47

5. Problems with Direct Estimation of Autocorrelation Functions 48

6. The Burg Technique of Estimating Reflection Coefficients 51

D. The Importance of the (R(0), C_1, C_2, ...) Description 55

1. A New Definition for Power Spectra 55

2. Spectral Properties in Terms of the (R(0), C_1, C_2, ...) Description 58

a. Upper and Lower Bounds on the Maximum Entropy Spectrum 58

b. The Average Value of the Logarithm of the Spectrum 60

c. Limit Properties of the Reflection Coefficient Sequence 62

3. Plotting Maximum Entropy Spectra 64

III. Multichannel Maximum Entropy Spectral Analysis from Autocorrelation Measurements 68

A. The Entropy of a Multichannel Time Series 69

B. The Solution of the Multichannel Variational Formulation 73

1. Deriving the Multichannel Prediction Error Filter Equation 73

2. The Multichannel Levinson Algorithm 78

C. Extending the Multichannel Autocorrelation Function 82

1. The Fundamental Multichannel Autocorrelation Matrix Theorem 82

2. The Multichannel Minimum Phase Theorem 84

3. The Multichannel Maximum Entropy Extension 90

IV. The General Variational Approach 97

A. The General Equations 97

B. A Solution Procedure 98

C. Global Convergence to a Unique Solution 102

D. Variational Principles 103

E. Consistency and Usefulness of Measurements 106

Appendix A - Determination of Pure Line Spectra 109

Appendix B - Manipulations of the Multichannel Equations 119
