

## **GP280 Lab 0: Getting familiar with the GP280 online forum [graded: /10]**

For this class, a google doc collection is created for handing in labs and for discussions. All students are required to have a gmail account. There will be a discussion board (doc) for each lab. When working on your assignment, please direct all labs related questions onto the discussion board. Your TA will check the online forum frequently. Also, you are encouraged to share your wisdom with others by contributing to the discussion.

This exercise is intended to show you how to post messages in the discussion forum. In addition, you will learn how to submit your assignment to the online Dropbox.

1. [/2] Email the TA your gmail address
2. [/2] Wait for the google doc collection called "GP280 Online Forum" to be shared with you.
3. [/2] Open the document "Labs Discussion > Discussions for Lab 1: Introduction of 3D Geometries". In the document, put down the following [your name]: Hello World!  
Please note that from now on, all messages posted onto the discussion board should be marked with your name.
4. Find a picture of yourself, upload the picture onto "Dropbox > SelfPortrait". Please name it "[yourname]\_Pic.jpg"  
From now on, when you submit your lab, please put it in the appropriate folder under Dropbox. The pdf file you submit should contain your full name.
5. Modify the permission of your uploaded file so that only your TA can access it. This can be done by using the "share" function. (for help, go to: <http://support.google.com/docs/bin/answer.py?hl=en&answer=151563>)

You are done! There is no need to submit a paper copy for this exercise. You will be given a score if you follow the steps above. Now you can work on Lab1.
