

Research Personnel

(not listed in previous reports)

R. S. Anderssen (Bob) received his B.S. and M.S. degrees from the University of Queensland, and completed a Ph.D. in applied mathematics at the University of Adelaide in 1966. He taught applied mathematics at Monash University, Melbourne, during 1967, and joined the Computer Centre, Australian National University, Canberra, as a research numerical analyst and applied mathematician in 1968. He has, since 1961, when he first worked on the problem of electromagnetic induction in the earth, often used the problems of mathematical geophysics as source material for the development of concepts, theories and tools in computational applied mathematics. He is a member of the AGU, ISS and SIAM, as well as other mathematical and computing societies.
