Acknowledgements	xv
Seismic data and software	xv
Changes from the first edition	xvi
Figures	xvii
Errata	xvii
Introduction	xviii
Scope	xviii
A brief history of seismology	xviii
Why 3D?	xx
Getting started	xx
I Waves:	
The foundation of seismology	1
1 General properties of waves	2
1.1 Mechanical waves	2

1.2	Particle motion	3
1.3	Polarization	4
1.4	Elastic properties	4
1.5	Wavespeed	7
1.6	Display of wavefield data	8
1.7	Waveform	9
1.8	Impulse response	15
1.9	Reciprocity	17
1.10	Source and receiver directivity	17
1.11	Wavefront and rays	18
1.12	Huygens' principle	20
1.13	Fermat's principle	20
1.14	Snell's law	24
1.15	Critical angle	26
1.16	Dimensional effects	27
	1.16.1 Waveform	27
	1.16.2 Energy density and geometric spreading	28
2	Waves in fluids	33
2.1	Why fluids?	33
2.2	Parameters	34
2.3	Equation of motion	36
2.4	The big picture	40
2.5	Velocity variation	41

2.6	What about density?	46
2.7	Fine layering	46
3	Understanding seismic events	51
3.1	Half space	51
3.1.1	Uncertainty analysis applied to direct waves	53
3.2	Reflection	55
3.2.1	Travel time	55
3.2.2	Reflection coefficient	63
3.2.3	Fresnel zone	72
3.3	Head wave	76
3.4	The point source: Tying it all together	82
3.5	Diffraction	86
3.6	Ghost	89
3.7	Velocity layering	93
3.7.1	More events	93
3.7.2	Multiples	94
3.8	Classification	96
4	Reservoir Fluid Properties	99
4.1	Pressure and Temperature Range	99
4.2	Gas	100
4.3	Oil	101
4.4	Brine	105

4.5	Fluid Mixture	109
5	Waves in solids	114
5.1	Strain	115
5.2	Stress	116
5.3	Hooke's law and elastic parameters	117
5.4	Equations of motion	119
5.5	Wave types and speeds	121
5.6	Mode conversion	124
5.7	Snell's law and critical angles	125
5.8	Velocity layering	126
5.9	Elastic reflection coefficient	128
5.10	Reflection coefficient approximations	129
5.11	Anisotropy	133
6	Waves in porous solids	136
6.1	Rock as a porous solid	136
6.2	Empirical relationships	137
6.3	Parameters	140
6.4	Equation of motion	140
6.5	Wave types	141
6.6	Rock density	141
6.7	Gassmann theory and wave speeds	142
6.8	Attenuation and dispersion	145

6.9	Rock velocity ranges	150
II Acquisition:		
Gathering seismic data		153
7	2D Land acquisition	154
7.1	Historical summary	154
7.2	hardware	155
7.2.1	Source	155
7.2.2	Receiver	159
7.2.3	Recording system	161
7.3	Field procedure	163
7.3.1	Vertical stack	163
7.3.2	Roll and cabling	164
7.4	SEGY headers and sorting	166
8	Financial Aspects of 3D Seismic	172
8.1	The Big Picture: Stock Price	172
8.2	Economics	174
8.3	The Exploration Process	174
8.4	A Savings/Gain Model	175
8.4.1	Savings	176
8.4.2	Gains	177
8.4.3	Net value, profit, and rate of return	177

8.5	Some Industry Trends	181
9	Survey predesign	186
9.1	Acquisition Parameters	187
9.2	Time sample rate	187
9.3	Offset range	189
9.4	Listen time	190
9.5	Spatial sampling and aliasing	191
9.6	Total signal-to-noise improvement	194
10	Land shooting geometry	200
10.1	Coordinates and related quantities	200
10.2	Cross spread method	202
10.3	Swath method	207
10.4	Fringe	208
10.5	Perimeter or loop method	212
10.6	Cabling, template shooting, and fold	218
10.7	Crooked line 2D	221
11	Land 3D design optimization	224
11.1	Optimization and inversion	225
11.2	Assumptions, target variables, and constraints	226
11.3	A direct method	229
11.4	Method 2	230
11.5	Examples	231

12 Marine acquisition methods	237
12.1 Towed receiver systems	237
12.1.1 Receiver cable	238
12.1.2 Source array	241
12.1.3 Acquisition geometry	244
12.1.4 Flip-flop shooting	245
12.1.5 Positioning	245
12.1.6 Cable feathering	248
12.2 Fixed receiver systems	252
12.3 Marine acquisition and the environment	254
13 Data dimensionality and components	257
III Data processing: Creating the seismic image	262
14 Processing and binning overview	263
14.1 Why Do We Need to Process Seismic Data?	263
14.2 Filtering and noise removal	266
14.3 Processing Flow	268
14.4 Bins	272
14.4.1 Bin Size Calculation	274
14.4.2 Effects of Fold and Offset Variation	278
14.4.3 Anatomy of a Bin	278

15 Computing	284
15.1 RAM and Disk Storage	284
15.2 2D Survey Size	287
15.3 3D Survey Size	287
15.4 Processing Speed	288
15.5 Speed and 3D Migration	290
16 Creating the CMP stack	292
16.1 Gain	292
16.2 Deconvolution	293
16.3 Sorting	299
16.4 Normal moveout	299
16.5 Dip moveout	310
16.6 Common midpoint stacking	312
16.7 Statics	314
17 Migration I: Concepts	320
17.1 Constant velocity migration and modeling pairs	321
17.2 Dip from Seismic Slope	327
17.3 Migration Distance	328
17.4 Variable velocity migration and modeling pairs	330
17.5 3D Migration	330
17.6 2D and 3D Lateral Resolution	331
17.7 Survey design for Linear $v(z)$	338

18 Migration II: Classification and velocity analysis	342
18.1 Kinds of migration	342
18.2 Stolt migration theory	347
18.3 Overview of algorithms	350
18.4 Kirchhoff depth migration methodology	351
18.5 Migration velocity analysis	356
19 Historical perspective	361
19.1 Progress in seismic processing	361
19.1.1 Dip moveout	362
19.1.2 Anisotropy	362
19.1.3 3D processes	363
19.1.4 Depth migration	364
19.2 A brief account of dip moveout	365
19.2.1 Dip moveout just isn't normal	366
19.2.2 Velocity variation	372
19.2.3 Anisotropy	376
IV Color Plates	378
V Interpretation: Extracting geologic information from seismic data	401
20 Synthetic seismogram, tuning, and resolution	402

20.1	Creating the synthetic seismogram	402
20.1.1	Earth model	403
20.1.2	Travel times	405
20.1.3	Reflection coefficients	405
20.1.4	Wavelet	407
20.1.5	Convolutional model	409
20.1.6	Examples	411
20.1.7	Transmission loss	418
20.2	Tuning	422
20.3	Resolution	427
21	Introduction to Interpretation	433
21.1	What Does It Mean to Interpret Seismic Data?	433
21.2	Background Information	434
21.3	Interactive Interpretation Systems	438
21.4	Interactive Interpretation Project Components	439
22	Data Volume	442
22.1	Data 2D subsets	443
22.2	Display of Seismic Data	445
22.3	Interpretation Products	446
23	Structure	449
23.1	Fault detection and mapping	450
23.2	Time structure and horizon tracking	456

23.3	Time-to-depth conversion methods	458
23.4	A vertical ray case history	460
23.5	Structural uncertainty	463
23.6	Extreme velocity variation	463
24	Stratigraphy	467
24.1	Stratigraphy and 2D seismic data	469
24.2	Stratigraphy and 3D seismic data	476
24.3	Stacked Channel Systems	477
24.4	Stratigraphy and structure: A case history	480
24.5	Carbonates	482
25	Seismic attributes	484
25.1	Definition and history	484
25.2	Classification schemes	485
25.2.1	General and relative	485
25.2.2	Dimensional	486
25.2.3	Reflection characteristic	486
25.2.4	Procedural	488
25.3	Prediction of reservoir properties	490
25.3.1	Procedure	490
25.3.2	Case history	490
25.3.3	Multiattribute analysis	492
25.4	Selected general attributes	494

25.4.1	Complex trace	494
25.4.2	Dip, azimuth, curvature, and gradient	495
25.4.3	Coherence	495
25.4.4	Spectral decomposition	498
25.4.5	Impedance	500
25.4.6	Spice	502
26	Amplitude in space, time, and offset	505
26.1	Prestack amplitude factors	505
26.2	Stack amplitude and R_0	506
26.3	Predictive rock model	507
26.4	Calibrated rock model for Glenn sandstone	508
26.5	Lateral and time-lapse effects	510
26.5.1	Gas	511
26.5.2	Porosity	512
26.5.3	Oil saturation	512
26.5.4	Lithology: Sandstone-limestone	512
26.5.5	Temperature (steamflood)	514
26.5.6	Lithology: Sandstone-clay	516
26.5.7	Permeability	516
26.5.8	Summary and discussion	517
26.6	Time-lapse 3D seismic	517
26.7	Offset effects (AVO)	523

A	Fourier Transform	528
A.1	Definitions	528
A.2	Frequency domain	530
A.3	Spike input	533
A.4	Properties of the Fourier transform	536
A.5	Two spikes	538
A.6	The discrete case	538
A.7	Detection of periodic signals	540
A.8	2D Fourier transform	541
B	Glossary of Terms	545
C	Conversion Factors	556
D	Bibliography	557
